

Regex Through The Years

✿ Literal characters are very limited. To expand on the
that, we have *Character Classes*.

✿ The Kleene star is nice and all, but we need better ways to specify the quantity and option requirements of the characters. Enter *Quantifiers*.

✿ Wouldn't it be nice to have more operators than just the pipe? Let's hear it for groups, backreferences, assertions, lookahead, lookbehinds... ok this is getting overwhelming. I'll stop there.
